

Raven BuJo's User's Manual

App Description:

Introducing Raven BuJo, a web-based to-do app inspired by the bullet journal method. With its user-friendly interface and a range of powerful features, Raven BuJo is designed to help you stay organized and accomplish your tasks with ease.

Start the app:

- Make sure that MySQL is using raven_bujo schema.
- Open a terminal in VS Code and to download my app's dependencies input:
 - npm install
- Open a terminal and input:
 - cd server
 - node server.js
- Open another terminal and input:
 - cd bujo
 - cd my-app
 - npm start
- It'll say that something is already running on port 3000, and will ask if you want to run on a different port, press y.
- The app should now open and appear in the browser.

Known Bugs as of June 7th:

- The Delete All plays the shake animation immediately instead of only when user clicks outside of the window
- Some changes not seen until page is refreshed such as editing a tag's name and color
- When a new task is added with tags, the tags are not saved
